Brian:

Here is the air monitoring data that I have been trying to send. It has been kicked back as it was not going through to your email. We are using a Multirae Multigas Confined Space Monitor PGM6228 (O2, CO, LEL, H2S, VOC). The Phenol readings are a conversion from the VOC readings. As you would expect, the elevated numbers are located near the equipment and headspace of the tanks.

Thanks

Gary Moore
